"The Convulsion-Facilitating Effect of Reserpine"

Budapest, Acta Physiologica Academiae Scientiarum Hungaricae, Supplement to Vol 22, 1963; p 30.

Abstract [Authors' English summary, modified]: The effect of reserpine on insulin-induced hypoglycemic convulsions was examined. The experiments indicate that changes in the amine level of the brain play a decisive role in the tendency to convulsions, thus hypoglycemia or a decrease in the brain glycogen level alone cannot be held responsible for the convulsant action of insulin.

"The Problem of Aortitis in Old Age."

Budapest, Etiológiai Közlemények, Vol 10, No 2, 62, pp 151-153.

Abstract: The article deals with the etiology of aortitis. The disease was found to be present in 31 cases of 73 autopsies on persons over 60 years of age. All these cases suffered from a great variety of diseases prior to death. The changes noted were mostly localized in the adventitia. Arteriosclerosis was well advanced in 22 cases of the 31. In 10 control cases of persons between 20-50 years of age, 2 cases of aortitis were found. The study of the medical history of the individuals did not reveal any correlation between aortitis and some data in the histories except for four cases of lues. The histological study showing localization in the adventitia suggests a rheumatic origin. Other histological evidence of rheumatic or other inflammation in most of the cases

"Evaluation of Metastases of the Cervical Lymph Nodes on the Basis of our Throat-Cancer Cases"

Budapest, Magyar Onkologia, Vol 10, No 4, Dec 1966; pp 205-207.

Abstract: The lymph nodes removed during block dissection were subjected to detailed histological examination. The processing of a single block dissection required 400-500 sections, and this could be carried out only in a few cases. It was found that 31% of the lymph nodes considered clinically negative contained microscopic metastases. No reference.

The experimental yields of several varieties of beets. Fr CHIBELAR and Jan SIMON. *Lisly Kulturov* 40, 53 (1929) -- The beets Dubrovická and Zlínští gave the highest yield and sugar content. The results were compiled from 7 expt. stations in Czechoslovakia. Seeds from Holland and Germany did not exceed the av. under the climatic conditions. FRANK MARESH

The results of ongoing experiments with sugar beets. F. CRNEHLA AND JAB. SIMON. *Listy cukrovky*. 69, 263 70(1931). Four domestic varieties of sugar beets, 4 German and 1 Polish were grown on 12 plots. The order of total yield of sugar was: 4 Czechoslovak, Zapotilova, Selecta-Praha, Wuhanka, Scholzert, Scholtzert 88, Rheinwänslelwa N, Mitte and Husacevskal P. 4 Czechoslovak, Zapotilova and Selecta-Praha were characterized by a high yield and good sugar content and excelled all foreign varieties in total sugar yield. Wuhanka had the highest sugar content but only an av. yield.

"The Interrelationship Between Diffuse Scleroderma and Pregnancy."

Budapest, Orvosi Hetilap, Vol 108, No 11, 12 Mar 67, pages 505-508.

Abstract:[Authors' Hungarian summary modified] The interrelationship between diffuse scleroderma and pregnancy was studied in three cases. All three cases had a history of repeated, spontaneous abortions. In one case, the pregnancies did not proceed past the first trimester and spontaneous abortions occurred. In the other two cases, smaller fetuses than expected according to their term, so-called "pseudo-premature" infants were delivered. In one case, a severe developmental anomaly occurred following steroid treatment during the pregnancy. In response to prolonged adrenocortical hormone treatment, however, a secondary sterility was relieved in the early phase of the disease in two cases. Because of the increased endogeneous ACTH effect during pregnancy, the condition of the patients was temporarily improved, without medication, both in the subjective sense and according to objective tests. After the

"Some Diagnostic Problems of Vaginal Trichomoniasis and of Its Control in the Course of Imidazole (Klion) Therapy."

Budapest, Orvosi Hetilap, Vol 108, No 10, 5 Mar 67, pages 452-455.

Abstract: [Authors' Hungarian summary] In 50 cases, signs of inflammation were evident as late as 2-6 weeks after Klion therapy given to a total of 124 patients with vaginal trichomoniasis. Those cases which became negative for the parasite in response to the Klion treatment or to the treatment of eventual secondary infections (42 cases) were classified into 2 groups retrospectively: 1) those where the tr. vaginalis at the urogenital area was not eradicated completely but was temporarily suppressed and 2) where the parasite was gotten rid of and the inflammation was maintained merely by its complications (cervicitis, pruritus). According to the observations, a faulty method of sample collection was often responsible for a temporary absence of tr. vaginalis. An attempt was made to improve the situation by using a solution obtained by irrigation of the vagina, for the test.

TITLE: Use of radioisotopes¹⁹ to identify freezing drills in the sinking of shafts

SOURCE: Jaderna energie, no. 3, 1966, 104-105

TOPIC TAGS: radioisotope, mining engineering

ABSTRACT: The article reports the results of experiments conducted to identify freezing drills by means of the radioisotope Co-60 in the sinking of air-shafts in the lignite deposit at Ratiskovice. The method developed is very simple, rapid and reliable. It permitted making clear the situation at a depth of 75 meters and improving the drilling technique. This paper was presented by A. Tezky.
